

Applications

This state-of-the-art skid steer steel tracks system uses pins and links made of heat treated forged chromium-enriched steel alloy to protect the tires against punctures and provides maximum floatation to go over sand, deep mud and debris. This material ensures exceptional wear resistance and guarantees extensive track life and low cost maintenance. The system has more pushing and pulling power, especially in deep mud, and sand or during demolition and land clearing.

- Full floatation
- Maximum traction
- Tire protection
- Self cleaning
- No tire to track slipping
- Less ground damage
- Fully rebuildable
- Interchangeable shoes
- Less skid steer bouncing

Specifications

Size	10"
Fits Tires	10x16.5
Steel Alloy	Manganese
